Revision History

Name	Date	Reason for Changes	Version

1. Introduction

1.1. Purpose

This document outlines the functionalities and relevant details of the One Big Hub 1.0. The software is an efficient venue reservation website designed to create a streamlined venue reservation process.

1.2. Document Conventions

For the purposes of this document, the following terms and its accompanying meaning are listed below:

- ADMU - Ateneo de Manila University
- CFMO - Central Facilities Management Office
- UMCO - University Marketing & Communications
- PPF - Project Proposal Form
- HE - Higher Education

1.3. Intended Audience and Reading Suggestions

This document is intended to be used by the product developers, product testers, project managers, as well as other relevant stakeholders. This SRS document comprises six main parts each having its own subpart. The six main parts are Introduction, Overall Description, External Interface Requirements, System Features, Other Nonfunctional Requirements, and Other Requirements. Should the user wish to read a specific part, they may do so as each part elaborates the different essentials of the software.

1.4. Product Scope

One Big Hub is a web-based platform designed to streamline the venue reservation process for student organizations. The system provides a centralized and accessible dashboard that allows users to view venue availability based on selected dates and timeframes.

The platform enables student organizations to efficiently submit, track, and manage venue reservation requests. By offering real-time visibility into reservation statuses and venue schedules, One Big Hub reduces the time, effort, and administrative overhead traditionally associated with venue booking.

Through its centralized interface, the system promotes transparency, efficiency, and informed decision-making, ensuring that student organizations can plan and execute events with greater ease and confidence.

1.5. References

Given its initial stage, the group considers utilizing relevant documentation for Django, Tailwind CSS, and other tech stack needed in the creation of the software. Aside from the relevant documentation, the software will also build upon the existing CFMO venue reservation system

2. Overall Description

2.1. Product Perspective

The One Big Hub provides a connection between students and Ateneo administrative offices to make processes among those offices easy and efficient. Normally, actions like project proposal forms and venue reservations require the tedious work of downloading and editing PPF and other documents needed for conducting an event. Our product is an improvement of Ateneo's CFMO site, streamlining processes by providing a system allowing for form creation and submission, along with their live updates.

2.2. Product Functions

- Provide submittable form for PPF(Project Proposal Forms)
- Recommend offices involved in a project
- Show live updates of all PPF's for review and approval
- Display venues along with their availability and occupancy
- Allow users to reserve available venues
- Display dashboard of all current and future org activities

2.3. User Classes and Characteristics

The main users of the One Big Hub are Ateneo student organization leaders as well as members of the Project's Logistics Committee. Org leaders may have experience in completing other related school procedures and may be used to answering forms/documents regarding them. Committee members may be used to receiving and accessing forms. They may also be experienced in answering similar forms as well. Regardless, both groups will be able to understand and use the functions of the hub properly.

2.4. Operating Environment

Hardware Platforms: Hosting of the application will be done through cloud based services (AWS, Heroku, or Azure). End-users will access the system using desktop computers and laptops with standard internet connectivity.

Software Components:

- Web Browsers: Google Chrome, Mozilla Firefox, Safari, Microsoft edge
- Database: PostgreSQL 14 or higher
- Runtime: Python 3.10+ for the Django REST framework

2.5. Design and Implementation Constraints

- **Tech Stack Requirements**: The development is limited to Tailwind CSS for the frontend, Django REST framework for the backend and PostgreSQL for the database.
- **Authentication**: The system will use Google OAuth, specifically restricted to @student.ateneo.edu for students and @ateneo.edu for admins to ensure only valid members of the organization have access.
- **Communication Protocol**: data transmission will occur over HTTPS to ensure security
- **Hardware**: Users would have to operate on a laptop or desktop to ensure maximum compatibility with the website.

2.6. User Documentation

User Manual for Forms submission: A digital document guide that covers how to submit PPF's, check venue availability, and manage their social feed.

2.7. Assumptions and Dependencies

Assumptions:

- Users have a stable internet connection when submitting the necessary forms such as Project Proposal Forms and Venue Reservation Forms to CFMO
- Administrative offices such as CFMO, CSMO, OSA, etc. are willing to migrate from manual/paper-based or PDF-based workflows to this centralized platform
- The volume of users will not go above the standard cloud hosting limits

Dependencies

- Google Authentication: The login system is dependent on the availability of Google's OAuth API
- Ateneo Email Domain: Assumes all students and admins have Ateneo Google Workspace Accounts
- Third-Party Libraries: Dependency on python libraries like django and tailwind plugins for UI components

3. External Interface Requirements

3.1. User Interfaces

The user interface will be developed using Tailwind CSS to make a dynamic, responsive, and modern looking design that would work across various screen sizes.

GUI: The system will follow a dashboard layout. There will be a sidebar that will provide navigation to the Activity Feed, Project Proposals, Venue Reservations, and Account Settings

Design: Additionally, a color palette composed of mainly blue, white, and fitting colors will be used to be consistent with Ateneo's branding and to maintain professionalism.

Forms: All submittable forms will make use of standard text fields, dropdowns for office selection, and a drag-and-drop file upload zone. Success and error messages will also be displayed via quick popup notifications or red validation text below input values. Primary buttons like "Submit Proposal" and secondary buttons like "Save Draft" will be implemented across all forms.

3.2. Hardware Interfaces

The One Big Hub is a web-based application and would not need any specialized hardware requirements beyond standard computer equipment.

Client Side: Users would interact with the system via standard computers using normal inputs using a keyboard and mouse/trackpad

Server Side: The application and database will be hosted on cloud-based servers to be decided on (e.g. AWS, DigitalOcean). The server should have sufficient storage to handle PostgreSQL databases and uploaded project documents.

3.3. Software Interfaces

The system interfaces with PostgreSQL for data persistence, and the Django ORM will manage all the data queries. The backend is built on Django REST Framework, which communicates with the frontend via JSON-based API calls. On the client side, the system will be compatible with Windows, macOS, and Linux via web browsers. The system interfaces with the Google OAuth 2.0 API to validate the credentials of the users and restrict access to specific Ateneo domains (@student.ateneo.edu and @ateneo.edu)

3.4. Communication Interfaces

The system will support all major modern browsers like Google Chrome, Mozilla Firefox, Safari, Microsoft Edge, etc. All communications between the client and the server must be encrypted using HTTPS (SSL/TLS). Data will be sent and received in JSON format through RESTful API endpoints. The system will communicate with Google's identity servers in order to verify that the email of users actually belongs to the Ateneo Google Workspace domain before granting them access.

4. System Features

This section describes the major functional features of theOne Big Hub system. The features are organized based on the main services provided to student organizations and administrative offices for event coordination and approval.

4.1. User Authentication and Organization Profile Management

4.1.1. Description and Priority

This feature enables student organizations and administrative offices to securely access the One Big Hub system through Google OAuth authentication. Upon authentication, the system creates and manages organization or office profiles that store identifying and contact information necessary for event coordination and approval workflows.

This feature is **High priority**, as authentication and profile management are prerequisites for all other system features. Without this functionality, users cannot access dashboards, submit events, or perform approvals.

4.1.2. Sub-Features

1. **Google OAuth Authentication**
   Priority: High
   This sub-feature provides secure, third-party authentication using Google OAuth. It ensures that only verified users with valid Google accounts can access the system.
   Details:
   - Users authenticate via their Google account rather than creating a new username/password.
   - The system retrieves basic user information (name, email, Google ID).

- Authentication tokens are validated on each session.

2. **Role Identification (Organization vs. Administrative Office)**
   Priority: High
   This sub-feature determines whether an authenticated user belongs to a student organization or an administrative office.
   Details:
   - On first login, the system prompts the user to select their role (organization or administrative office).
   - The role determines which dashboard and permissions are assigned.
   - Role information is stored and reused on subsequent logins.
3. **User Profile Creation**
   Priority: High
   This sub-feature allows students to create a profile that is associated with their group within the system.
   Details:
   - A user profile is automatically created on first login if one does not exist.
   - Required information includes:
     - Name
     - Affiliated organization/office
   - Each user must be affiliated with a student organization or an administrative office.
4. **Organization Profile Creation**
   Priority: High
   This sub-feature allows student organizations to create a profile that represents their group within the system.
   Details:
   - An organization profile is automatically created on first login if one does not exist.
   - Required information includes:
     - Organization name
     - Primary contact email
     - List of officers (names and roles)
     - Moderator name
     - Organization location (building and room number)
   - Optional information includes:
     - Organization description

        - Logo or image
    - The profile serves as the owner for all forms submitted by the organization.

5. **Administrative Office Profile Creation**
   Priority: High
   This sub-feature allows administrative offices to create and manage office profiles used for reviewing and approving events.
   Details:
   - Profiles are created automatically upon first login.
   - Required information includes:
     - Office name
     - Office contact email
     - Office location (building and room number)
   - Office profiles are linked to approval workflows.
6. **Access Control and Protected Routes**
   Priority: High
   This sub-feature ensures that only authenticated users can access protected areas of the system.
   Details:
   - Unauthenticated users attempting to access protected pages are redirected to the login page.
   - Authorization checks are performed before loading dashboards or sensitive data.
7. **Profile Viewing and Editing**
   Priority: Medium
   This sub-feature allows authenticated users to view and update their organization or office profile information.
   Details:
   - Users can edit contact information and officer lists.
   - Changes are saved immediately and reflected across the system.

4.1.3. Stimulus/Response Sequences

Scenario 1: User First Login

1. The user navigates to the login page.
2. The user selects “Sign in with Google”.
3. The system redirects the user to Google OAuth.
4. The user authenticates with Google.

5. The system receives an authentication token and validates it.
6. The system prompts the user to select their profile type: "User", "Student Organization", or "Administrative Office".
7. The user selects the corresponding option.
8. The system creates a new profile.
9. The user is redirected to their dashboard.

4.1.4. Functional Requirements

- **REQ-1:** The system shall allow users to authenticate using Google OAuth.
- **REQ-2:** The system shall validate authentication tokens before granting access.
- **REQ-3:** The system shall create an organization profile upon first successful login by an organization user.
- **REQ-4:** The system shall create an administrative office profile upon first successful login by an office user.
- **REQ-5:** The system shall restrict access to protected features to authenticated users only.
- **REQ-6:** The system shall allow users to view and edit profile information.
- **REQ-7:** The system shall redirect unauthenticated users to the login page.

4.2. Venue Reservation and Availability Management

4.2.1. Description and Priority

This feature allows users to view available venues, check occupancy schedules, and submit venue reservation requests. It helps organizations plan events efficiently by preventing schedule conflicts. This feature is of High priority.

4.2.2. Sub Features

1. **Venue Reservation Types**
   This subfeature allows the creation of Type 1 and Type 2 venues. Reserving a Type 1 venue does not require a PPF. On the other hand, reserving a Type 2 venue requires an approved PPF.
2. **Display**
   When a user is on the display page, they will see the following:
   - Venue Names List (Type 1 or Type 2)
   - Availability Button

- Book Reservation Button
- Reservation Status (Book, Pending, Booked)

The data requirements for this are:

- Name of Venue
- Available and unavailable time slots
- VenueID
- VenueType
- Reservation status
- Availability Button (view / Availability Calendar)
- Book Reservation Button (view / Reservation Form)

3. **Reservation Form**

This is the fillable form that contains the following fields:

- Full name
- Contact information
- Purpose of reservation
- Number of guests
- Reserve button

The data requirements for this are:

- ReservationID
- First Name, Last Name
- Email address
- Phone number
- Purpose of reservation
- Number of guests
- Reserve Button (sends request to admin, view / Venue Reservation Page)

4.2.3. Stimulus/Response Sequences

The user will need to navigate to the "Venue Reservation" page. The system will display a list of the available venues with their availability calendars. The user shall select a venue, fill out the attached reservation form, and submit the request. The system will record the request and will update the venue's pending status accordingly.

4.2.4. Functional Requirements

- REQ-1: The system shall display a list of available venues and their schedules.
- REQ-2: The user shall be able to submit a venue reservation request via the attached online form.
- REQ-3: The system shall prevent double-booking of venues.

- REQ-4: The system shall notify users if a selected venue is unavailable.
- REQ-5: The system shall store reservation requests for administrative review.
- REQ-6: The system shall have two venue reservation types: Type 1 and Type 2
- REQ-7: Type 1 venues shall proceed immediately with the process of reserving a venue
- REQ-8: Type 2 venues shall undergo PPF check to ensure that the document is approved before proceeding to reserve a venue.

4.3. Project Proposal Form Creation and Submission

4.3.1. Description and Priority

This feature allows organizations to create and submit project proposal forms using a structured web form instead of editable documents or PDFs. This improves efficiency and standardizes submissions. Users can also upload supporting documents (e.g. letters, permits, etc.) as part of the submission process. Such document attachments are included directly within the proposal form to support administrative review. This feature is of High priority.

4.3.2. Sub-Features

1. **Input Interface**
   Details:
   - Input fields include Project Title, Nature of Activity, Target Attendees, and Objectives
   - Dropdown menus for office selection (e.g. selecting which admin office reviews the form
   - Date and time pickers for event scheduling
2. **Drag-and-Drop Document Uploading**
   Details:
   - Users can upload additional external files such as signatory letters, permits, budget spreadsheets.
   - The system validates the file formats (PDF, PNG, JPEG) and enforces size limits before uploading.
3. **Draft Management System**
   Details:
   - A “Save Draft” secondary button is available on the form interface.

- Saved drafts are stored in the database with a “Draft” status and can be retrieved later from the dashboard for completion.
- Validation rules (e.g. empty required fields) are bypassed for drafts to allow partial saving.

4. **Submission and Validation Logic**
   Details:
   - A “Submit Proposal” primary button triggers the final review.
   - The system runs a full validation check for empty fields, invalid dates, missing required attachments.
   - Upon successful submission the status would change from “Draft” to current proposal status, and the user receives a success notification.

4.3.3. Stimulus/Response Sequences

The user will need to access the “Project Proposal” page and fill out the required fields. Upon submission, the system will validate the inputs and additional files (if any) and save the proposal for review by the appropriate offices.

4.3.4. Functional Requirements

- REQ-1: The system shall provide a web-based project proposal form.
- REQ-2: The system shall validate required fields before submission.
- REQ-3: The system shall allow users to upload supporting documents within the form.
- REQ-4: The system shall restrict uploads to approved file types and sizes.
- REQ-5: The system shall store submitted proposals in the database.
- REQ-6: Uploaded documents and additional files shall be accessible to authorized administrative users during review.
- REQ-7: If invalid or incomplete data is submitted, or if an invalid file is uploaded, the system shall display an appropriate error message.
- REQ-8: The system shall validate that uploaded files do not exceed the determined size limit (5MB per file), and are of valid file types (PDF, DOCX, JPG, PNG).

- REQ-9: The system shall allow users to save the form as a draft without requiring all mandatory fields to be filled, storing the data for next visit.
- REQ-10: The system shall prevent final submissions if required fields are missing or if invalid data is detected.
- REQ-11: The system shall provide feedback if data entered in the fields are invalid.
- REQ-12: The system shall display a success popup notification once the proposal is submitted successfully
- REQ-13: The system shall automatically associate the submitted proposal with the organization profile of the currently logged-in user

4.4. Administrative Review and Approval of Project Proposals

4.4.1. Description and Priority

This feature allows administrative offices (e.g., CFMO, OSA, CSMO) to review, comment on, approve, or reject submitted reservation requests and project proposals through an admin interface. Organization users can view live email/notification updates on the status of their proposals based on administrative actions. This feature is of High priority as it enables the core approval workflow of the system.

4.4.2. Sub-Features

1. **Organization View of Live Updates**

   Priority: High

   Proposals will display the following
   - Proposal/Project Name
   - Current status(e.g Submitted, Under Review, Approved, Rejected)
   - Officer in charge of review
   - Admin Comments
   - Date of proposal submitted

   The data requirements are:
   - ProposalID
   - Name of Organization
   - Proposal/Project Name
   - Proposal Status
   - Last Updated Timestamp
   - Admin Office ID

    - Admin Comments
2. **Admin Review Page**
   Administrative users will need to log in to the system and access the "Admin Review" page. The system will display a list of all submitted reservations or proposals relevant to and assigned to their office. Admins can review details, download attachments, and update proposal status.
3. **Authentication & Access Control**
   Admin users must authenticate by logging into the system. Each admin account is associated with a role (CFMO, OSA, CSMO)
4. **Proposal Listing View**
    - When logging in, admins are redirected to the Admin Review Dashboard. The system will display a list of proposals filtered by:
        - Assigned office
        - Status (e.g Submitted and Under Review)

4.4.3. Stimulus/Response Sequences

Administrative users will need to log in to the system and access the "Admin Review" page. The system will display a list of all submitted reservations or proposals relevant and assigned to their office. An admin will need to select a proposal, review its details and attached documents, and update its status. The system will record the decision and immediately reflect the updated status on the organization's side.

4.4.4. Functional Requirements

- REQ-1: The system shall provide administrative users with access to submitted venue reservations and project proposals.
- REQ-2: The system shall allow administrators to approve, reject, or mark reservations or proposals as under review.
- REQ-3: The system shall allow administrators to add comments or notes to reservations and proposals.
- REQ-4: The system shall update reservation or proposal status in real time for organization users.
- REQ-5: Only authorized administrative accounts shall be able to modify reservation or proposal statuses.

4.5. Organization Activity Feed and Posting Dashboard

4.5.1. Description and Priority

This feature provides a centralized dashboard that functions as a social media-style feed where organizations can view posts from other organizations about current and upcoming events. Organizations can also create and publish their own activity posts to inform the campus community. This feature is of Medium priority.

4.5.2. Sub Features

1. **Event Tally**
   Users can see how many events are done in either day, week, month. This can also be filtered according to the group of venues (aka the building).
2. **Event Types Tags**
   Users can use tags to show what the event is about. Some of the tags could be <Tambay Week>, <Bazaar>, etc. This allows organizations to see how many events per type are released in a timeframe.

4.5.3. Stimulus/Response Sequences

Upon logging in, the user will be directed to their organization's dashboard. The system will display a feed of posts from different organizations in chronological order. The user may scroll through the feed or create a new post by submitting upcoming event details through a social media-style posting form.

4.5.4. Functional Requirements

- REQ-1: The system shall display a feed of organization posts in timely chronological order.
- REQ-2: The system shall allow organizations to create and publish posts about their upcoming events and activities.
- REQ-3: The system shall display posts from multiple organizations on the dashboard.
- REQ-4: The system shall allow users to view details of an activity or event from a post.
- REQ-5: The system shall allow users to see upcoming events through a calendar dashboard
- REQ-6: The system shall allow users to filter which venues they want to see in the calendar dashboard.
- REQ-7: The system shall allow users to filter which venues they want to see based on the venue's capacity
- REQ-8: The system shall allow users to filter which venues they want to see based on a specific time period in a day.

5. Non-Functional Requirements

5.1. Reliability

- **NFR-R1:** Any authentication or profile retrieval failure shall be handled without preventing other authenticated users from accessing the system.
- **NFR-R2:** If a user loses internet connection while saving a draft or submitting a form, the system should not lose the data entered in the browser session via caching.
- **NFR-R3:** The system shall ensure data integrity and prevent service failure by utilizing Django ORM to sanitize all form inputs against SQL injection attacks
- **NFR-R4:** The system will continuously store administrative decisions such as approval, rejection, and comments and recoverable whenever the system restarts or fails
- **NFR-R5:** The system will continuously show available venues along with occupancy schedules and store venue reservation requests whenever the system restarts or fails

5.2. Usability

- **NFR-U1:** A user shall be able to complete the login process and reach their dashboard within three user interactions after selecting “Sign in with Google”, under normal conditions.
- **NFR-U2:** The Admin Review Interface will present proposal status, comments, and actions in a clear and consistent layout
- **NFR-U3:** The interface for Venue Reservation will have a clear, navigable layout, allowing users to easily find the venues and schedules they need.

5.3. Efficiency

- **NFR-E1:** The system shall complete Google OAuth authentication and redirect the user to the appropriate dashboard within 5 seconds under normal network conditions.
- **NFR-E2:** Profile retrieval or creation operations shall not exceed 2 seconds of processing time.
- **NFR-E3:** The system will support at least **50** administrative and organizational users without noticeable degradation in response time.

5.4. Maintainability

- **NFR-M1:** All authentication and profile management code shall be modularized into separate components to allow independent updates without affecting other system features.
- **NFR-M2:** Approval workflow logic will be modular, allowing new statuses or administrative roles to be added with minimal code changes

5.5. Portability

- **NFR-P1:** The authentication and profile management feature shall support deployment on Windows, Linux, and macOS environments.
- **NFR-P2:** The system shall be deployable using a virtual environment or containerized setup without requiring platform-specific code changes..
- **NFR-P3:** The Administrative Review and Approval shall be operable on desktop and laptop computers using standard web browsers such as: Chrome, Firefox, Edge, and Safari.

6. One Big Hub Project Iteration Plan

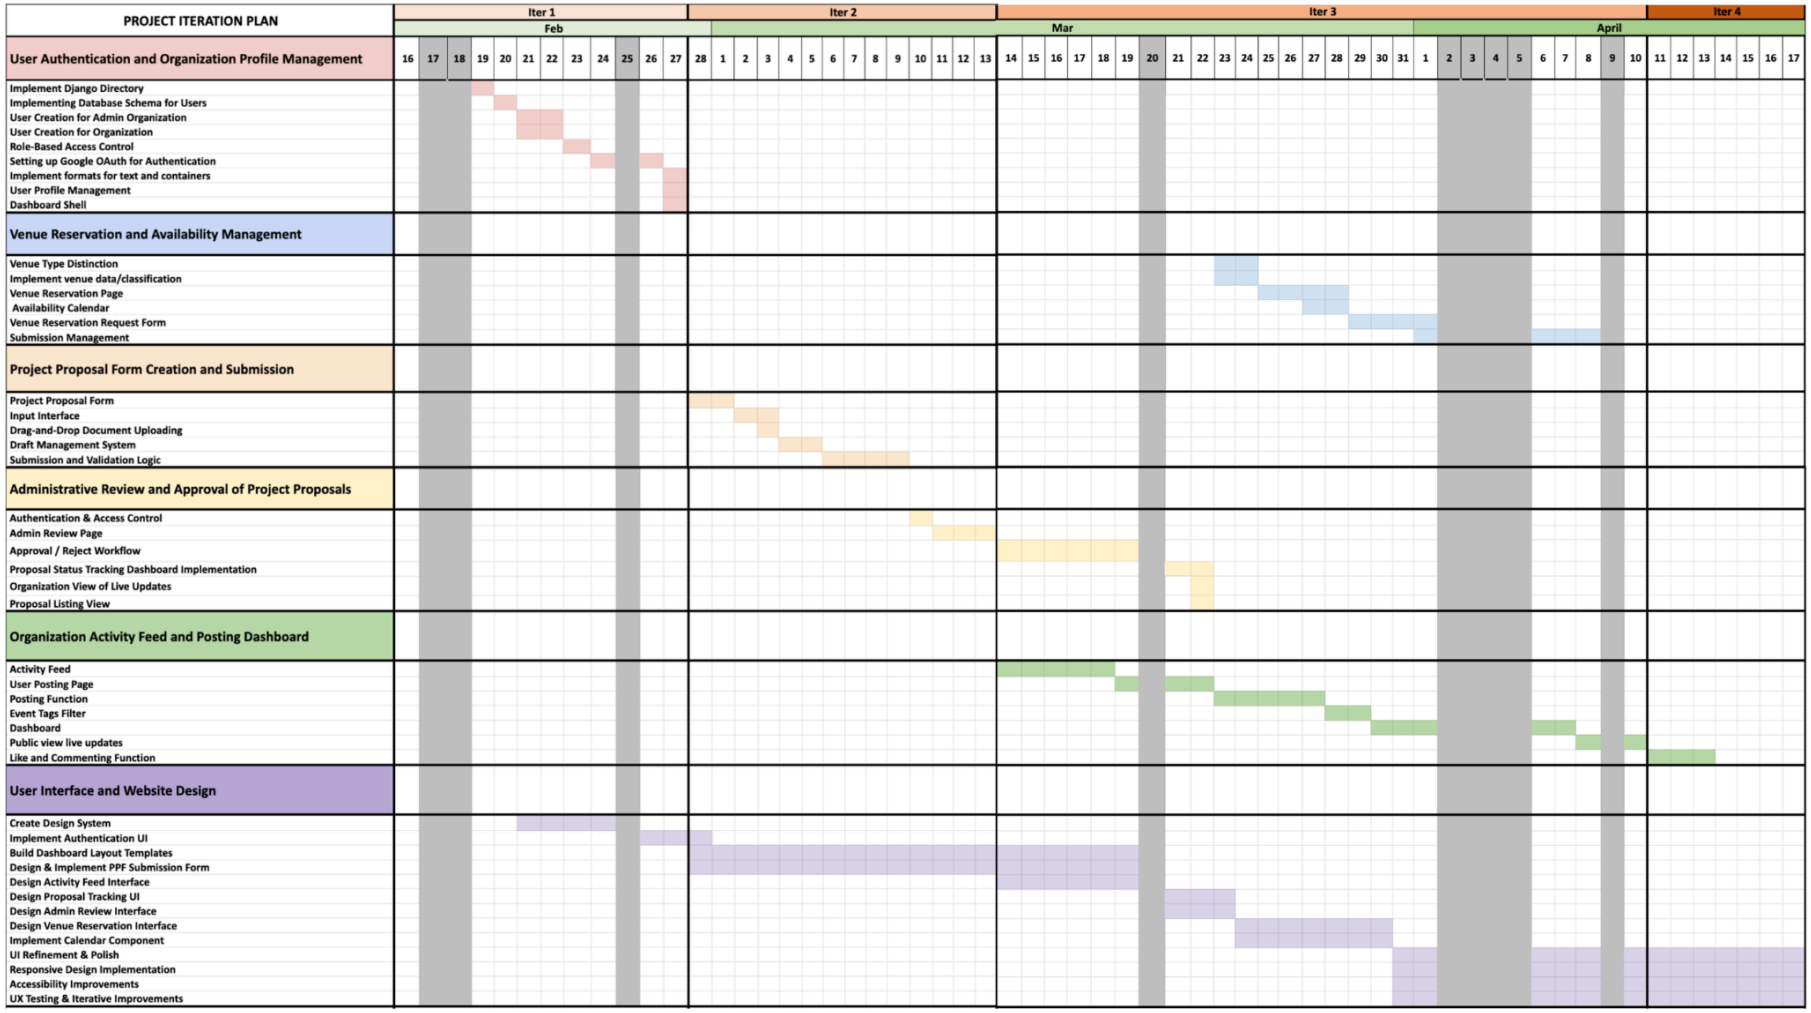
6.1. Work Item Assignments (Features)

Feature	**Priority**	**Iteration**	**Assigned To**	**Effort Estimate**
Authentication & Access Control	High	2nd	Lorenzo Uriel Ramoy	1
Admin Review Page	High	2nd	Lorenzo Uriel Ramoy	2
Approval / Reject Workflow	High	3rd	Lorenzo Uriel Ramoy	5
Proposal Status Tracking Dashboard Implementation	Medium	3rd	Lorenzo Uriel Ramoy	2
Organization View of Live Updates	Low	3rd	Lorenzo Uriel Ramoy	1
Proposal Listing View	Low	3rd	Lorenzo Uriel Ramoy	1
Venue Reservation and Availability Management	Medium	3rd	Matthew Joaquim De Luna	
Project Proposal Form Creation and Submission	High	2nd	Miguel Luis Felipe	2
Input Interface	High	2nd	Miguel Luis Felipe	2
Drag-and-Drop Document Uploading	High	2nd	Miguel Luis Felipe	1

Draft Management System	High	2nd	Miguel Luis Felipe	2
Submission and Validation Logic	High	2nd	Miguel Luis Felipe	3
Administrative Review and Approval of Project Proposals	Medium	2nd	Lorenzo Uriel Ramoy	2
Activity Feed	Medium	3rd	Antonth Chrisdale Lopez	5
User Posting Page	Low	3rd	Antonth Chrisdale Lopez	2
Posting Function	Medium	3rd	Antonth Chrisdale Lopez	5
Event Tags Filter	Low	3rd	Antonth Chrisdale Lopez	2
Dashboard	Medium	3rd	Antonth Chrisdale Lopez	5
Public view live updates	Low	3rd	Antonth Chrisdale Lopez	2
Like and Commenting Function	Low	3rd	Antonth Chrisdale Lopez	1
Implement Django Directory	High	1st	Lorenzo Uriel Ramoy	1
Implementing Database Schema for Users	High	1st	Lorenzo Uriel Ramoy	2
User Creation for Admin Organization	High	1st	Lorenzo Uriel Ramoy	3
User Creation for Organization	High	1st	Lorenzo Uriel Ramoy	3
Role-Based Access Control	Medium	1st	Lorenzo Uriel Ramoy	2
Setting up Google OAuth for Authentication	Medium	1st	Lorenzo Uriel Ramoy	2
Implement formats for text and containers	Low	1st	Lorenzo Uriel Ramoy	1
User Profile Management	Low	1st	Lorenzo Uriel Ramoy	2

Dashboard Shell	Low	1st	Lorenzo Uriel Ramoy	1
Design Theme and Template, Authentication UI	Medium	1st, 2nd	Lucia Danielle Sulay	3
Dashboard & PPF Form Layout	Medium	2nd	Lucia Danielle Sulay	5
Activity Feed, Proposal & Admin Tracking, and Venue Reservation Interface	High	3rd	Lucia Danielle Sulay	5
UI Refinement, UX Testing & Improvement	Medium	3rd, 4th	Lucia Danielle Sulay	2

6.2. Gantt Chart



7. Other Requirements

Appendix A: Glossary

Appendix B: Analysis Models

Appendix C: Team Organization and Roles

The Ateneo Organization Hub will be using Facebook Messenger to coordinate. The team will be assigned features that they will be implementing. The roles are as follows:

- **Lorenzo Uriel Ramoy:** Main developer for Feature 4.1 and 4.4
- **Lucia Danielle Sulay:** Main frontend developer
- **Antonth Chrisdale Lopez:** Main developer for Feature 4.5
- **Miguel Luis Felipe :** Main developer for Feature 4.3
- **Matthew Joaquim De Luna:** Main developer for Feature 4.2
